

## TECHNICAL BULLETIN:

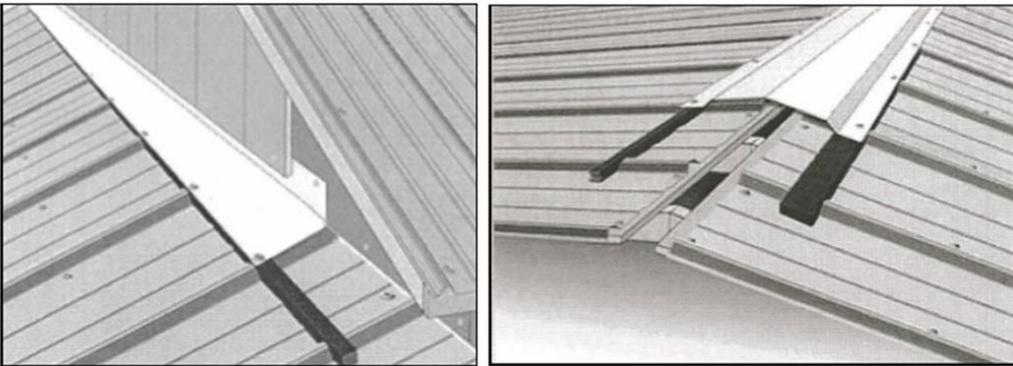

### Foam Closure Uses and Installation: Tough Rib / Diamond Rib Profile

The main purpose for a closure is to keep out unwanted items or animals from passing through the ribs of a Metal / Polycarbonate panel, or between Metal / Polycarbonate panels and trims.

There are 2 specific types of Closures:

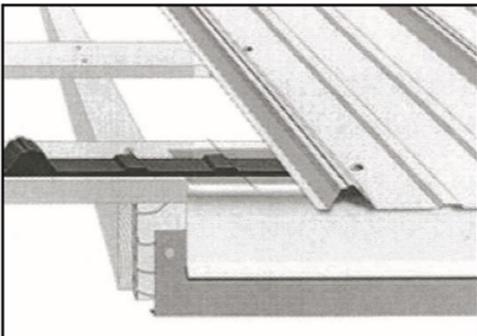

#### 1: Large Tab / Outside Closure

This form of closure is intended to seal off the top of a panel. Most common use is under a ridge cap or wall splice. These closures come in "Black".

#### 2: Small Tab / Inside Closure

This form of closure is intended to seal off the under side of a panel. Most common use is under the roof panel that meets the eave or any open end of panel profile that will allow debris or pests access. These closures come in "Black".
